

The

National Outbreak Plan

**The National
Outbreak Plan
is your first step
to contingency
planning.**

Being prepared for an outbreak is the most effective way to mitigate the risks of one occurring.

Enhancing outbreak preparedness

The National Outbreak Plan by Livetec Systems is an easy to navigate document designed to explain the process of dealing with disease.

This unique plan helps you to enhance your own, and anyone who has access to your birds, understanding of disease, and the declaration and management of an outbreak, should you be impacted by one.

Our time saving plan is filled with guidance on how to declare disease, how to navigate the regulations and legislation set by assurance schemes and the UK Government, managing the media and County Parish Holding numbers as well as how to navigate restrictions set by Zones.

What is the National Outbreak Plan?

The Livetec National Outbreak Plan simplifies the regulations and legislation set by assurance schemes and the UK Government.

The plan is filled with up-to-date information, detailing everything you need to know should you be impacted by a disease outbreak, licensing issues, or restriction zone, like a disease control zone, Avian Influenza Prevention Zone (AIPZ) or a Surveillance Zone (SZ).

Why use the National Outbreak Plan?

If you fail to prepare, you will be in the worst position possible should you be impacted by an outbreak.

Not acknowledging the measures that are designed to support you is a critical mistake that can not only cost you the welfare of your animals, but in a commercial capacity, can cost you millions.

The National Outbreak Plan from Livetec is designed to enhance your preparedness and understanding of the current landscape and how you should operate within it. It is the first step of contingency planning, which is highly desirable to assurance schemes, insurers and government agencies.

This unique plan breaks down avian influenza, how to spot it and how to declare your suspicion, should you believe your animals have been impacted by it. It also defines the zones you will be impacted by, should you or a neighbouring premises have a confirmed disease outbreak.

In addition, the plan clearly defines all of the licensing requirements, including movement licensing and breakdowns, that as a bird owner you have to adhere to, should you be near a confirmed outbreak, as well as how to complete any measures required and submit them. Additional features include how to respond to the media, how to change or update your CPH, mental health resources and a comprehensive acronym glossary.

The National Outbreak Plan not only supports you, it saves you time, money and resources, should you be impacted by bird flu.

What is included in the National Outbreak Plan?

As the first step to contingency planning, our National Outbreak Plan is packed with the critical information you need to navigate the worst situations.

Disease outbreaks in poultry, like avian influenza, Salmonella and e. Coli are becoming increasingly frequent on premises home to birds, not only across the UK, but globally.

This plan is filled with all of the information you need to know, from how to handle an outbreak on your own premises to handling the requirements caused by an outbreak on a neighbouring premises, including:

- A how-to guide for disease declaration
- Information reporting when zones are implemented
- Explanation of movement restrictions
- Movement licensing and their conditions of use
- Zone definitions and their requirements
- How to deal with the media
- Farming related support services and mental health planning
- A guide on how to change or update your CPH number
- Updates of the Government's exotic diseases control and AI policy
- An acronym glossary to quickly define key terms

Why do I need a National Outbreak Plan?

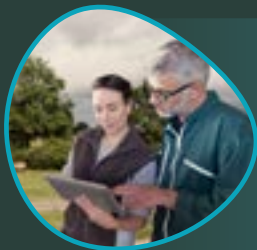

There are many benefits to owning a National Outbreak Plan, including:

- Easy to follow and use handbook for disease outbreaks in the UK
- Saves you and your staff time in an urgent situation
- Less labour intensive, making licensing user friendly
- Being prepared will save you money on insurance, time, and manpower
- Allows you to focus on your animals instead of researching logistics.

Biosecurity advisory service

Our biosecurity advisory service provides you with an on-farm visit with a biosecurity expert. Our full on-farm discovery sessions make us a supportive partner, helping you to minimise risks and know how you can better protect your farm from disease incursion.

Contingency plan

Our contingency plans encompass every aspect of farming businesses, predicting scenarios, risks and emergencies that could arise in the future and designing strategies that help to manage the impact of these concerns. Supported by a range of plans, this also helps make you compliant and insurable.

Biosecurity plan

Without a biosecurity plan in place, you are leaving your business and animals highly susceptible to disease incursion. Our biosecurity plans encompass and outline all of the measures that must be followed by every single person on and off farm to prevent the introduction of deadly pathogens.

Emergency response plan

An emergency response plan significantly enhances your preparedness. Designed to cover everything that APHA needs from you if and when they visit your farm business. This plan holds all of the critical information they need, in one place, allowing you to be less stressed and make your processes smoother.

Cleaning and disinfection plan

A critical part of farming includes the ability to undertake thorough and comprehensive cleaning and disinfection of your premises. Our cleaning and disinfection plan is designed to give you the framework for all of the measures you need to take, with clear instructions that show compliance to APHA.

Farm Health Guardian

Farm Health Guardian (FHG) by Livetec Systems is a biosecurity management system that records the movement of trucks and people on and off farm properties for rapid contact tracing in the event of a disease outbreak. An invaluable tool for enhancing biosecurity on-farm.
